EXECUTIVE SUMMARY

Albino is a decentralized all-in-one ecosystem on the Polygon blockchain which is one of the fastest-growing and safest Blockchain protocols. Our team developed the community-driven project. We aim to take cryptocurrency to new heights. We aim to be a platform that will provide all facilities under a single platform. Albino will be a whole ecosystem that will provide features like Staking, NFT Marketplace, Swapping exchange, and Metaverse in the future. Albino will develop its own unique NFT marketplace and will connect the decentralized community. Stake your NFT, earn tokens and use it on our marketplace to buy different things.

The main value proposition for investors in Albino is exposure to a new brand of the community-funded crypto movement. By buying into the Albino token community, investors are joining a revolution that is foremost motivated by the spreading of goodwill and the execution of common goals between like-minded individuals. We are going to create a brand in the gaming industry.

INTRODUCTION

Albino is a modern-day all-in-one decentralized cryptocurrency platform on Polygon Blockchain. Albino is a high-performance club that offers a variety of services on a single platform. A full ecology will be built around the Albino, with features like staking, NFT Marketplace, Albino Metaverse, and an exchange, as well as Liquidity Pool. Albino will create its own NFT marketplace and serve as a hub for the decentralized community. Stake your NFT, gain tokens, and spend them on our own marketplace to buy real-world items. Our NFT collections are unique in that only one may exist, and they are difficult to duplicate. As a result, it's safe to suppose that you'll be one of the few people who have these treasures. Users will be able to earn yield in the form of Albino tokens by staking. We are changing the market with a decentralized global financial system that is more transparent, accessible, and fair. Our first blockchain is the Polygon blockchain.

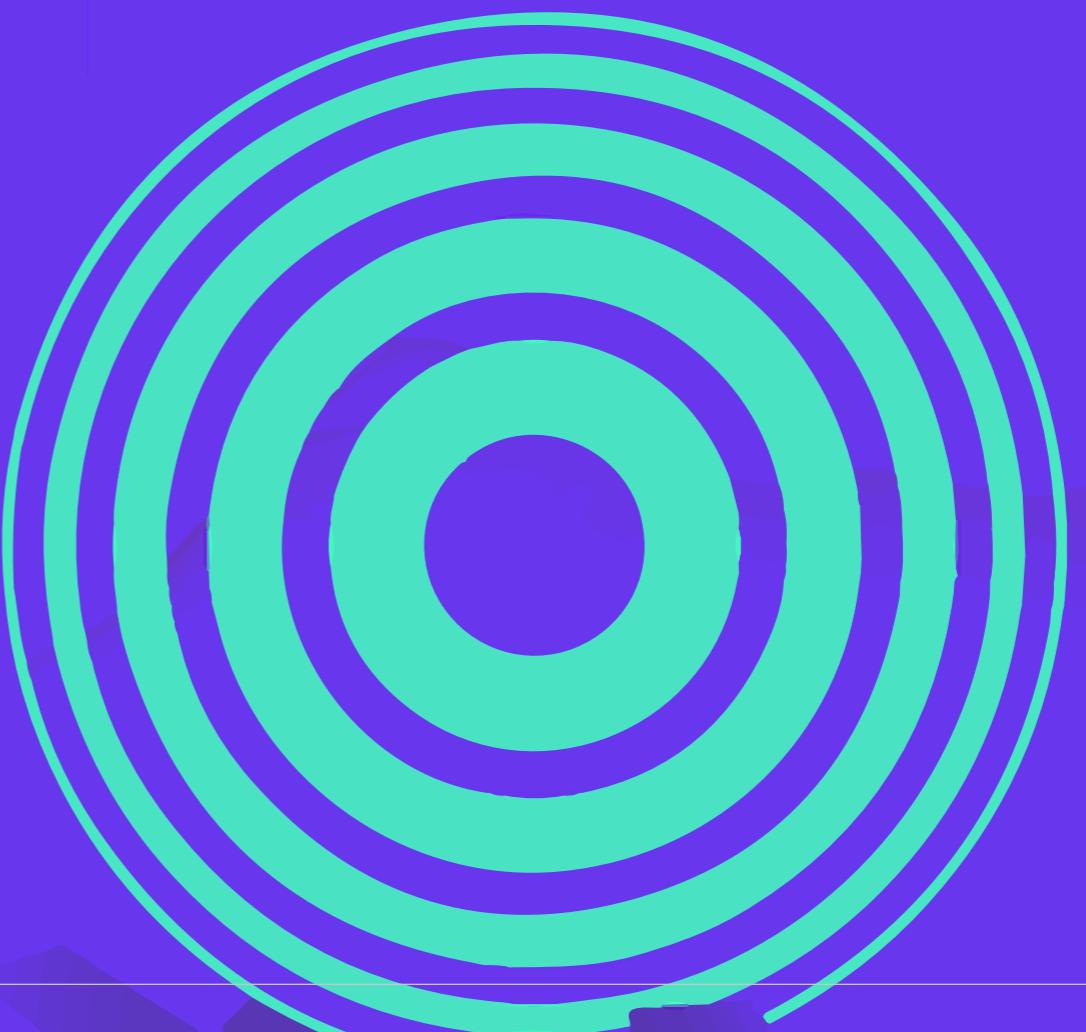

Albino is a Gaming based community token developed mainly to create a safe haven for game lovers. Our main goal is to provide people with a safe and trustworthy place where they can use their crypto for rewards, staking & Games Prizes. Technology will enable a financial revolution, allowing everyone to be more financially linked and empowered. Albino aims to give security, transparency, high deposit and withdrawal limits, and higher odds. In a nutshell, Albino is a single-form solution-based ecosystem.

MISSION

Albino is a decentralized finance platform built on a blockchain with a mission to create a community-driven ecosystem that empowered the holders to better their financial condition.

- Provide every holder with simple and effective ways to gain exposure to digital assets.
- Lower the barrier for entry to a more advanced financial ecosystem.
- Operate as a community-focused and community-driven digital asset, fully decentralized in every sense of the word.
- Decrease volatility and increase positive price pressure in digital asset staking.
- Our mission is to create a new innovative NFT & Metaverse platform.
- We envision building a new brand gaming industry.
- Stake your NFT, earn tokens and use it on our marketplace to buy or sell different things.

VISION

Everyone participating in the project is working toward the same end goal as a result of the Albino Ecosystem. We envision a world where wealthbuilding strategies that were once only accessible to affluent individuals become available to everyone, transferring the power over our financial systems back to the people. Albino is going to create a revolutionary ecosystem to bring more people into digital assets, helping to earn a passive income through redistribution/reflection, by holding the token long-term, along with maintaining their privacy, security, and autonomy along with digital and social problems. Albino is going to create a revolutionary gaming ecosystem to bring more people into digital assets, Building a safe and secure legal crypto online gaming platform that is positioned for global adoption with no limitations helping to earn a handsome income.

CORE VALUES OF ALBINO

Community

The Albino ecosystem's most valuable asset is its community. We wondered at first if a project could flourish based on a decentralized, community effort. Due to the power of its community members and investors, Albino was able to win.

Utility

In the crypto realm, we believe utility is the cornerstone of value. The Albino platform was established on the belief that the crypto sector is severely underutilized. We believe that utility will drive crypto adoption and growth and that the Albino will be the crypto ecosystem that people adopt because of its utility-focused nature.

Interconnectivity

Simply said, every component of a system interacts with and is reliant on the others. Albino believes in building a linked system of mutual trust and trustworthiness, where the sum of its parts is more than the sum of its parts.

Inclusivity

Inclusivity is at the very heart of our mission here at Albino. We believe that anyone, regardless of race, gender, or religion should have easy access to wealth generation. Unfortunately, not everyone has disposable income. With Albino, your income or access to capital is irrelevant to your ability to generate wealth.

PURPOSES OF OUR PLATFORM

**The first easy-to-use
gaming cryptocurrency**

Metaverse is the world's first cryptocurrency designed just for online investors in metaverse with a fair advantage. In the most popular gaming community-building platform online, you may earn and sell virtual items.

**Virtual Goods
on the Blockchain**

A platform for managing, distributing, and trading virtual products. Gamers and content providers will benefit from a new system of virtual ownership.

**A new gaming experience
with real ownership & value**

As they play, online gamers may bring or transfer their assets from game to game, community to community, increasing the value of their digital wallet.

**A solution to Fraud
& High Fees**

Every legit virtual item purchase results in the loss of 7.5 things due to fraud. Tokens will establish trust and security issues when there will be loss of token

CHALLENGES

Payment Fraud

It is estimated that for every legitimate virtual purchase made, there are 7.5 virtual items lost to fraud. Assets stored and managed online can be open to manipulation or chargebacks. Merchants have to deal with extra burdens, and scammers damage the game's reputation.

Locked in and Centralized

Digital items and currencies are usually locked to a single game and not transferable. Trading items outside of the game environment is cumbersome and difficult. If a player gets banned, they can lose all of their items and currency.

High Fees and Slow Transactions

Game publishers and communities rely on third-party platforms to process virtual goods transactions. Gamers encounter slowness, opaque fund flow, and high transaction fees.

No open standards

There are currently no widely-accepted standards for decentralized currencies and assets in games. The user experience is often an afterthought, so users don't know what to expect.

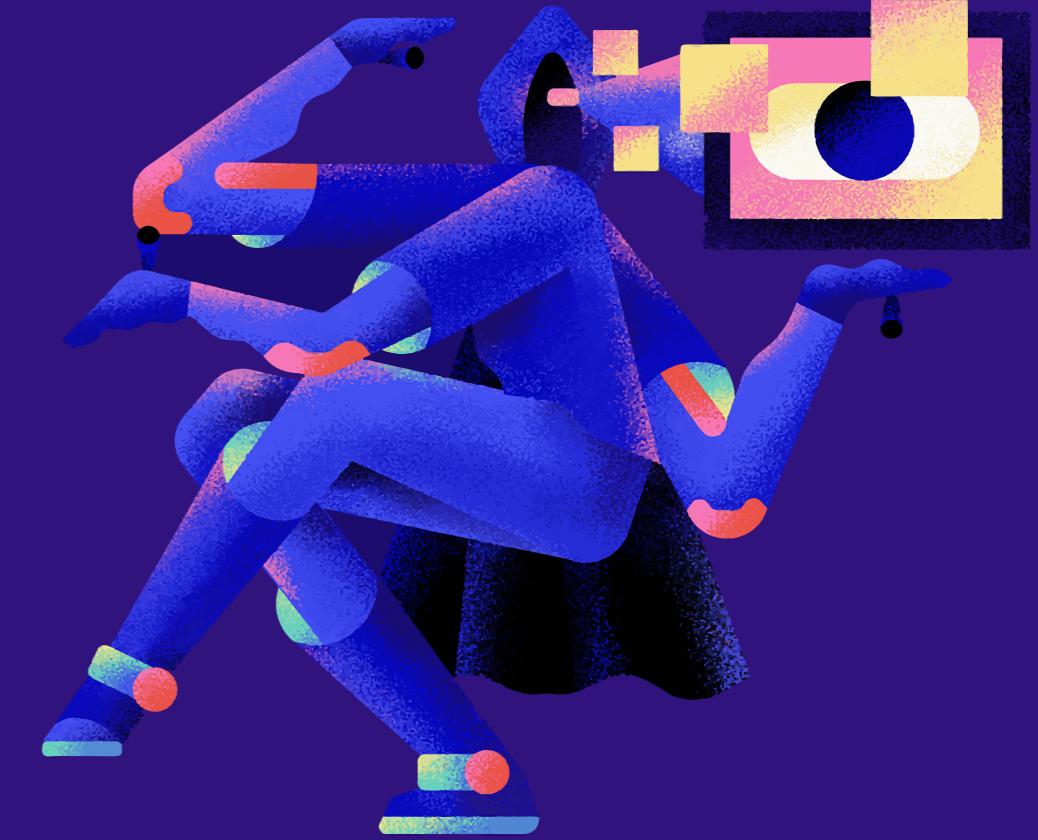

Lack of True Ownership & Rarity

Virtual items are, in essence, licensed to the gamer and are often only available for use on their proprietary platforms. At times they can be manipulated, lost, or taken back with little recourse for the user. Genuine transparency is missing.

Lack of value gamification

Value-based gamification features are lacking in content management systems and forum software. Users do not get rewarded in real-world value for participation or contribution.

BENEFITS OF ALBINO

Albino emphasizes the necessity to compensate players for their Participation in Gaming. Earn play to earn rewards from our rewards pools. Rewards are distributed based on a gaming system that involves the rewards and NFT Marketplace. They can earn additional numbers of tokens from the gaming platforms.

Benefits for Gamers

- Purchase and sell things without the fear of being defrauded.
- Maintain value by trading between gaming products for your currency in any community or game. Have precious cash and unique goods that you can't lose.
- To find and exchange game stuff, go to Albino marketplace. Play games to earn Albino tokens.
- Retain value by converting bespoke virtual products back to Albino tokens.
- Participate in communities and other ecosystem activities to earn Albino tokens.
- Albino tokens may be used to purchase in-game stuff. Show off your possessions in website widgets to prove ownership.

Play-to-earn Rewards

Albino Ecosystem utilizes a Unique rewards mechanism. For example, if you hold a token you will earn rewards in the shape of an Albino token and the user can also hold, buy, and sell NFT to earn rewards.

GLOBAL VIRTUAL INDUSTRY

01.

The global augmented reality (AR), virtual reality (VR), and mixed reality (MR) market is forecast to reach 30.7 billion U.S. dollars in 2021, rising to close to 300 billion U.S. dollars by 2024.

02.

The Virtual Reality (VR) market is estimated to grow at a CAGR of about 48.7% over the forecast period 2021 to 2026. With many individuals compelled to work remotely because of the COVID-19 pandemic, the very idea of how organizations work together is evolving quickly. This is anticipated to augment the market for virtual reality.

03.

As of now, employees are collaborating utilizing video-conferencing platforms, for instance, Zoom, and talking on Slack, Teams, and other texting applications. However, there's another, the conceivably undiscovered path for individuals to work together regardless of whether they're handfuls or even several miles apart: virtual reality (VR).

04.

VR Technology has gained widespread recognition and adoption over the past few years. Recent technological advancements in this field have revealed new enterprises. Numerous players are emerging in this market with the hopes of navigating it toward mainstream adoption.

05.

Virtual reality has often found its application compelling, with interactive video games or even movies and television series. Wherever it is too dangerous, expensive, or impractical to do in reality, virtual reality is seen as an ideal replacement. With the increasing demand for cloud gaming and innovative gaming consoles, the demand for immersed environment gaming is increasing rapidly.

06.

One of the most well-known applications for VR headsets is gaming. Companies like Oculus, HTC, and Sony have developed a variety of gadgets that consumers may utilize to have a fully immersive gaming experience. However, XR products can also be used for other purposes, such as remote help and training.

07.

The investments by the technology vendors are creating advancements in the field of display technology, which is going to change the vision of the traditional methodology. With technology giants like Google investing considerable amounts in tech startups to develop VR devices and other prominent players investing in their R & D over this segment, the market's future will be more competitive.

08.

Consumers are widely using VR applications based on different purposes, such as in the automobile, gaming, and media and entertainment industries. The latest technologies across the consumer electronics segment are boosting the growth of virtual reality for multiple applications across the marketplace. For instance, consumers are moving toward virtual reality in gaming with high definition, stunning graphics, and motion with high-end audio.

09.

ECOSYSTEM

Staking is beneficial in crypto-currency since it creates benefits for keeping the coin on any exchange and produces passive revenue. In a decentralized environment, holding a currency and staking the pool is the simplest option. While staking, there is higher energy consumption and a lower probability of danger than with any crypto mining. Albino is available to assist you.

ALBINO STAKING

Albino works on Blockchain, which is eco-friendly, working on a proof of stake. In addition to being one of the largest crypto exchanges by trading volume, it offers exemplary staking services. Albino ensures users' funds are safe by leveraging effective security measures and providing a Secure Asset Fund for Users (SAFU). Our staking method at the time of writing is arguably one of the safest and eco-friendliest methods (for cryptocurrency) to earn passive income. The platform stores all staked tokens using a secure wallet and a double-checking system. Albino staking is quickly becoming a practice of gaining passive income by merely storing or locking funds in a wallet as more individuals, including institutional investors understand the crypto market's lucrativeness.

The staking network provides you with the necessary skills and information and authenticates stakes on your behalf for a small part of your staking profits, allowing you to earn massive returns, which are rather substantial. Staking platforms that enable investors to essentially obtain staking rewards have popped up in response to the rapid growth of crypto staking stealthily. Therefore, if you're looking to earn a very passive income through Staking, this is essentially the place to be, which is quite significant. The Albino enables users to stake, store, and exchange cryptocurrency.

- Simple to operate. It works just like any other program or wallet that you use daily.
- Extremely secure. It's just a case of safeguarding your private key.
- Enables cross-border transactions in real-time. And they are barrier-free, intermediary-free transactions.
- Transaction costs are minimal. Transferring money is much cheaper than with conventional institutions.
- Enables cross-currency transactions. This enables you to do simple currency conversions.

STAKING AND ITS BENEFITS

Staking is useful in crypto-currency since it creates incentives and passive revenue by keeping the coin on any exchange. In a decentralized environment, holding a currency and staking the pool is the most convenient option. There is a lot more energy used and a lot more chance of losing money while staking than with any other kind of crypto mining. Albino is here to help.

THERE ARE A FEW QUANTIFIABLE BENEFITS OF STAKING COIN WITH ALBINO ECOSYSTEM

NO HARDWARE IS REQUIRED

PASSIVE INCOME

SCALABILITY

ECOFRIENDLIER

MORE COSTEFFECTIVE

HIGHLY SECURED WITH THE HELP OF SMART CONTRACT

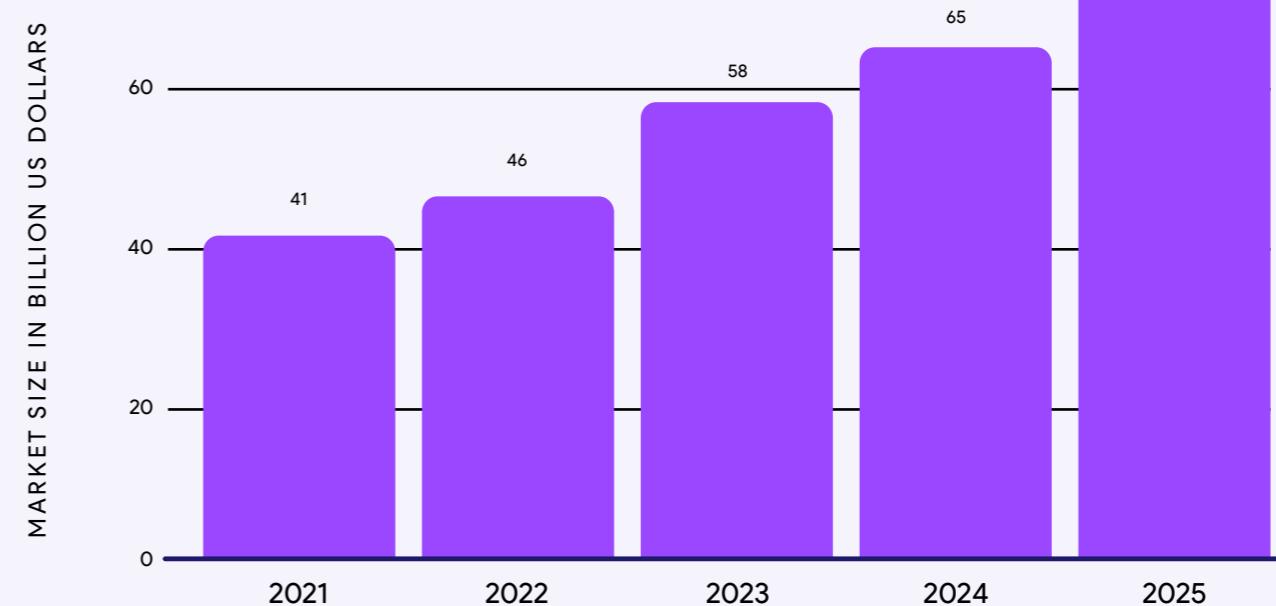

GLOBAL NFT MARKETPLACE

According to a recent estimate from blockchain analytics firm Chainalysis Inc., about \$41 billion worth of crypto was connected with smart contracts related to NFT markets and collections from the beginning of 2021 until mid-December.

Last year, the popularity of non-fungible tokens (NFTs) skyrocketed, with multimillion-dollar sales, and celebrities like musician Shawn Mendes, socialite Paris Hilton, and former first lady Melania Trump are on board.

The NFT market is predicted to expand at least 33% annually, reaching \$80 billion in net sales volume by 2025 and almost \$350 billion by 2030. Though this may appear to be a large amount, we are convinced that the market's real growth will much exceed the investment Jefferies' forecasts.

An Albino, NFT is a digital asset that represents real-world objects like art, music, ingame items, and videos. They are bought and sold online, frequently with cryptocurrency, and they are generally encoded with the same underlying software as many cryptos. A non-fungible token (NFT) is financial security consisting of digital data stored in a blockchain, a form of a distributed ledger. The ownership of an NFT is recorded in the blockchain and can be transferred by the owner, allowing NFTs to be sold and traded. NFTs typically contain references to digital files such as photos, videos, and audio. Because NFTs are uniquely identifiable, they differ from other cryptocurrencies, which are fungible. The market value of an NFT is associated with the digital file it references.

The transparent nature of the underlying code means that the scarcity and ownership of any given token are evident without the need for a trusted intermediary. We view the emergence of NFTs as a continuation of a paradigm shift from centralized to decentralized systems. This framework is now unlocking fresh business models for the creators of digital and physical collectibles. Albino is a widely known NFT project. The underlying token for each Albino encodes a unique genome that defines its appearance, traits, and hereditary lineage. Albino cannot be replicated and cannot be transferred without the user's permission.

Everyone in the digital world asserts that NFTs give a public certificate of authenticity or proof of ownership, but the legal rights conveyed by an NFT are not always clear. The blockchain defines ownership of an NFT as having no inherent legal meaning and does not necessarily give copyright, intellectual property rights, or other legal rights over the linked digital file. An NFT does not hinder the sharing or copying of its associated digital file, nor does it prevent the production of NFTs that reference identical files. First of all, as I always emphasize on this point that is the only all-in-one NFT marketplace built for collectors and creators.

ALBINO NFT MARKETPLACE

NFTs are rapidly sweeping the world of digital art and collectibles. Digital artists' lives are being transformed as a result of massive sales to a new crypto-audience. Non-fungible is an economic word that can be used for objects like furniture, music files, and computers. Because of their unique features, some goods cannot be substituted for other items.

Fungible goods, on the other hand, can be swapped because their worth, not their unique features, characterizes them. At any given time, an NFT can only have one owner. The unique ID and metadata that no other token can replicate are used to manage ownership. Smart contracts that assign ownership and govern the transferability of NFTs are used to create them. The NFT technology gives you the peace of mind that no matter what happens to the blockchain, nodes will always be operational. As a result, nothing can really happen to the information. This is due not only to the money they produce but also to the money they safeguard.

The Albino Universal Marketplace allows all players in the game to purchase and sell any asset type, as well as publish job postings for in-game jobs that are compensated. The bulk of the assets traded in the Marketplace will have been earned via in-game activities. It is also a place to keep track of assets acquired through pre-sale and idea sales. Other participants will either put bids or accept the price limit as is. All assets are considered deflationary due to the permanent loss during regular economic activity. Unlike typical online games, this deflationary asset-burning mechanism ensures that assets are unique and limited in availability.

WHAT IS NFT USED FOR?

People interested in Crypto-trading and people who like to collect artwork often use NFTs. Other than that, it has some other uses too like:

Digital Content

The most significant use of NFTs today is in digital content. Content creators see their profits enhanced by NFTs, as they power a creator economy where creators have the ownership of their content over to the platforms they use to publicize it.

Gaming Items

NFTs have garnered considerable interest from game developers. NFTs can provide a lot of benefits to the players. Normally, in an online game, you can buy items for your character, but that's as far as it goes. With NFTs, you can recoup your money by selling the items once you're finished with them.

Investment and Collaterals

Both NFT and DeFi (Decentralized Finance) share the same infrastructure. DeFi applications let you borrow money by using collateral. NFT and DeFi both work together to explore using NFTs as collateral instead.

Domain Names

NFTs provide your domain with an easier-to-remember name. This works like a website domain name, making its IP address more memorable and valuable, usually based on length and relevance.

BENEFITS OF NFT

People interested in Crypto-trading and people who like to collect artwork often use NFTs. Other than that, it has some other uses too like:

SECURITY

The NFT technology gives you the peace of mind that no matter what happens to the blockchain, nodes will always be operational. As a result, nothing can really happen to the information. This is due not only to the money they produce but also to the money they safeguard.

COPYRIGHT

One of the most significant benefits of the NFT technology is that it allows artists and content creators to keep full copyright ownership. In most licensing agreements, this is not the case. This permits them to continue to make money without having to give up their copyrights. This simply explains the continuity of resource supply for each hero's aid recipient.

AUTHENTICITY

The advantages of non-fungible tokens are essentially determined by their rarity. NFTs are created on the block chain, which means they are tied to one-of-a-kind data. The particular qualities of NFTs reveal their ability to add value. Simultaneously, NFT manufacturers have the option of releasing a restricted number of NFTs to create supply scarcity.

BOOSTING GAMING POTENTIAL

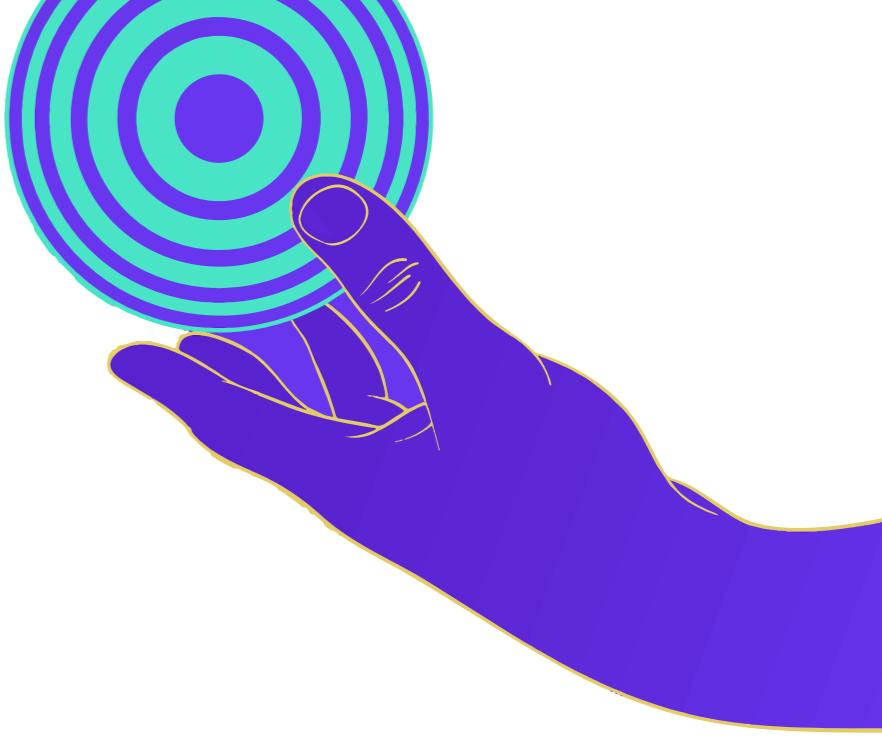

NFTs have seen a lot of interest from game developers. NFTs can provide records of ownership for in-game items, fuel in-game economies, and bring a host of benefits to the players.

UNIQUE

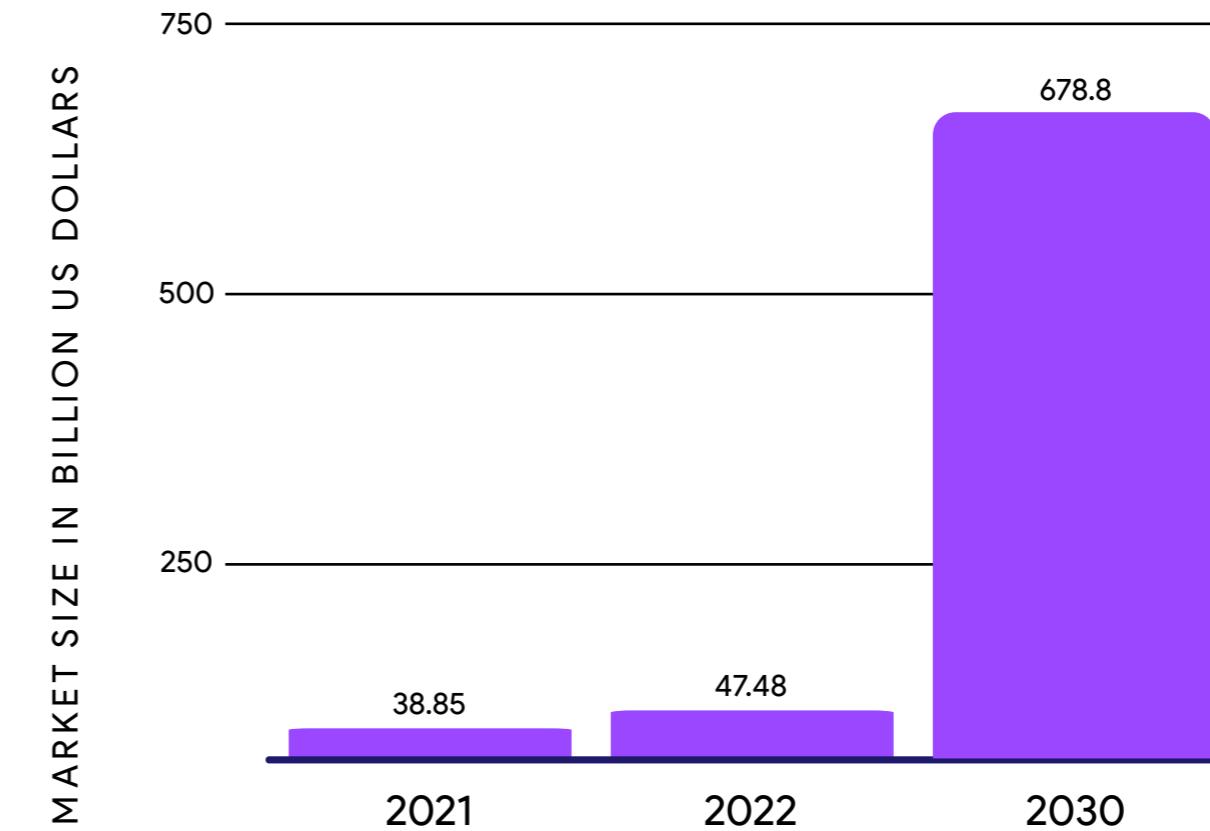

They are unique in that only one may exist, and they are difficult to duplicate. As a result, it's safe to suppose that you'll be one of the few people who have these treasures.

METAVERSE MARKET REVENUE WORLDWIDE

In 2021, it was estimated that the global metaverse market size stood at 38.85 billion U.S. dollars. In 2022, this is expected to rise to 47.48 billion U.S. dollars, before surging to 678.8 billion U.S. dollars by 2030. Regarded as the next iteration of the internet, the metaverse is where the physical and digital worlds come together.

ALBINO METAVERSE

Today, “metaverse” is one of the buzziest words in tech, and is being enthusiastically embraced by software and game developers across industries ranging from crypto and gaming to social media. The metaverse has become a very real phenomenon featuring a number of thriving platforms with increasingly extensive crypto integrations.

An Albino metaverse is an immersive virtual world that incorporates blockchain technology and cryptocurrency launching its own token. An Albino metaverse is a shared, immersive virtual world in which players, usually represented by avatars, can interact with each other, construct experiences, and create in-world objects and landscapes. Albino Metaverse typically has its own intrinsic economies and currency, with which users can buy, sell, and trade digital

real estate, items, avatar accessories, and more. You can experience the Albino metaverse via a computer, virtual reality (VR) headset, or smartphone.

Specifically, an Albino metaverse is a metaverse that incorporates blockchain into its underlying technology and crypto assets, such as Albino tokens, into its economy. While Albino metaverse-like environments have existed in massive-multiplayer online games for some time now, the incorporation of blockchain, crypto, and VR into the sector is not just drastically altering who can participate and what they can do, but also demonstrating the real-world market value of assets, interactions, and experiences earned in the digital realms of blockchain games. Albino Metaverse crypto assets and items, such as digital land and NFTs, are typically represented by Albino metaverse tokens. Their ownership is recorded on the blockchain and can even be exchanged for digital assets.

KEY FEATURES OF ALBINO METAVERSE

Designers of Albino metaverse have generally sought to distinguish their worlds from earlier iterations of a metaverse in several key ways:

DECENTRALIZATION:

While early virtual worlds were owned and controlled by companies, Albino metaverses are typically decentralized, with some or all components of metaverse games built on blockchain technology. This means that Albino metaverses themselves tend to diverge from the mainstream business structures and value extraction models of today's gaming industry. The unique structure of the Albino game can open up more equitable engagement opportunities for participants.

USER GOVERNANCE:

Albino's metaverse like Decentraland makes use of decentralized autonomous organizations (DAOs) and governance tokens to help put their users in control of the game's future, allowing them to drive changes and updates through voting. In this way, the Albino metaverse can be more than just Albino games; they can grow into entire societies with economies and democratic leadership.

REAL-WORLD ECONOMIC VALUE:

Because Albino metaverse uses Albino Tokens and blockchain infrastructure, their economies are directly connected to the wider crypto economy. This allows holders of Albino metaverse tokens, and VR-Gaming to trade them on DEXs and NFT marketplaces, commanding real-world value for their in-world investments.

ALBINO LIQUIDITY

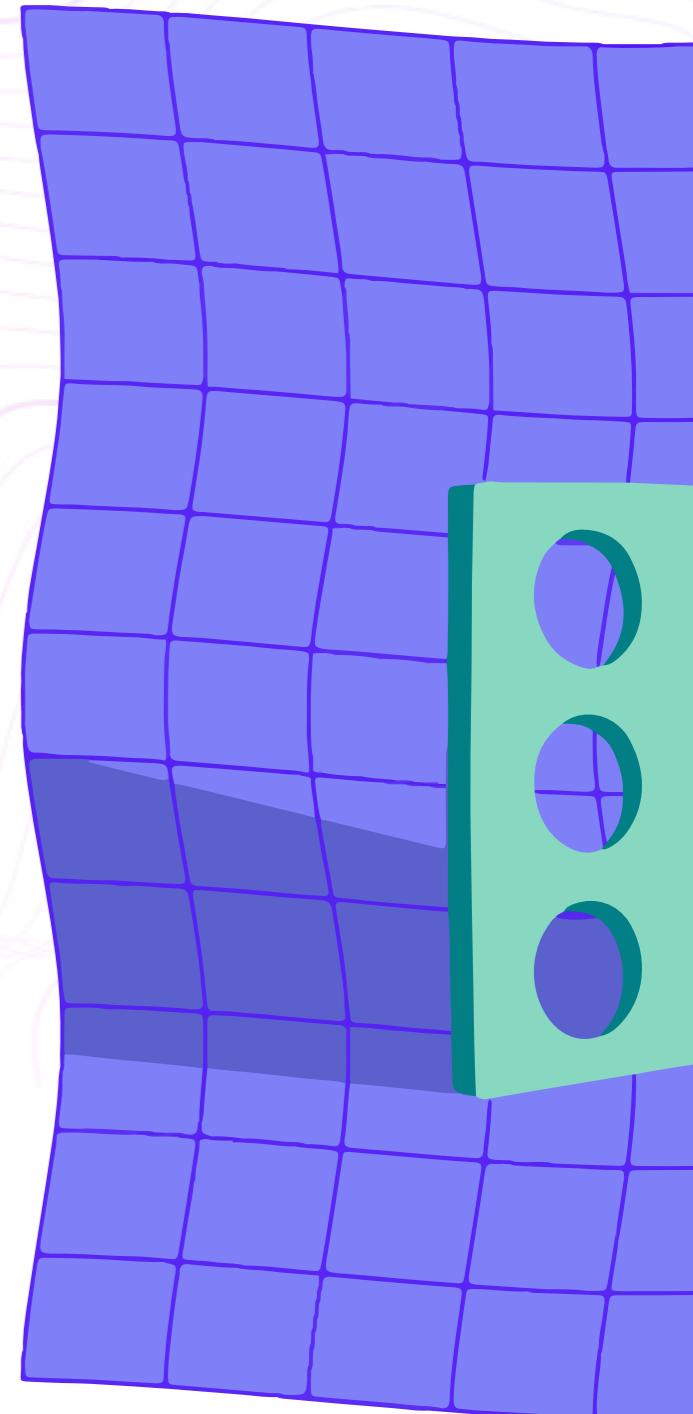

Providers of liquidity are compensated with LP tokens. Users pay trading fees on DEX, which are distributed to liquidity providers based on the number of LP tokens or percentage stake they control in the pool. LP may incur a temporary loss as a consequence of providing liquidity, and may not get the exact quantity of tokens returned.

The Albino protocol ensures that the assets of token holders are promptly seized and frozen for liquidity. The major objective is to keep the holder aware of Albino's performance by preventing huge drops in bulk trade-offs. The DeFi, like the Safe Moon token, has a high price value with little volatility in the trading market.

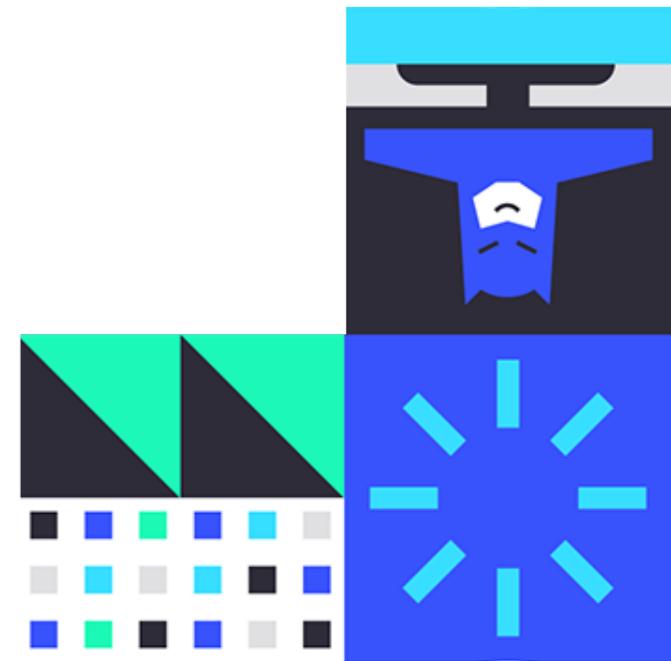

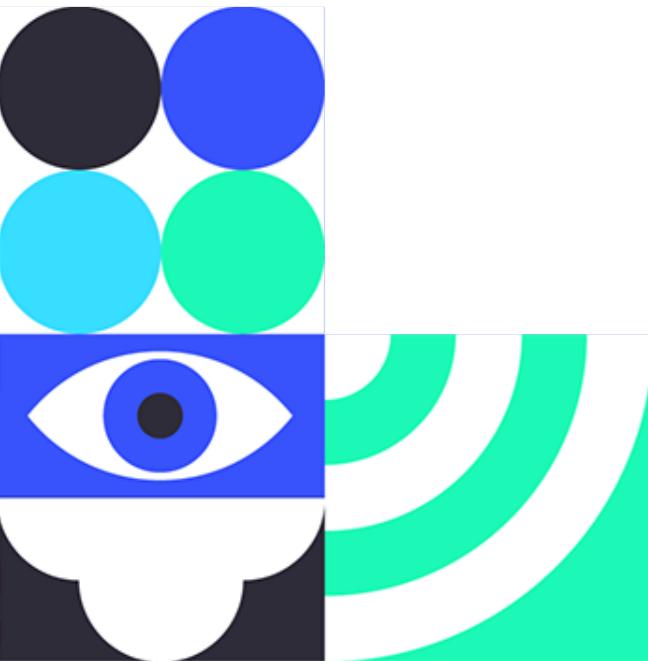

Automatic LP is Albino's secret. We have a function here that serves a dual purpose for holders. To begin, the contract takes tokens from both sellers and buyers and deposits them in the LP, therefore providing a steady price floor. Second, the penalty acts as an

arbitrage-resistant mechanism, guaranteeing that the Albino supply stays secure as an incentive for holders. In theory, the extra LP offers stability by adding the tax to the token's total liquidity, so increasing the token's overall liquidity and preserving the token's price floor.

This is in contrast to the burn function of other reflection tokens, which benefits only in the short term from the specified supply reduction. The Albino LP's price stability mirrors this function, but with the extra benefit of a fixed price floor and cushion for holders. The goal is to minimize larger price declines when whales sell their tokens later in the game, preventing the price from fluctuating as much as it would without the automatic LP mechanism. This is all in an effort to alleviate some of the shortcomings of the current DeFi reflection tokens. As a result, we are certain that our system and protocol will defeat outmoded reflection tokens. We are certain that our approach and protocol will defeat outmoded reflection tokens.

ALBINO BRIDGE

Albino Bridge is an advanced decentralized exchange built for swapping ERC-20, BEP20, and Polygon tokens-based tokens. Albino Bridge is a Unique Decentralized Exchange where users can switch to Ethereum, Binance smart chain, and Polygon Blockchain, for swapping any coin supported by ERC-20, BEP-20, and Polygon.

Albino Bridge is a unique platform that is operating in the cross-chain blockchain without the involvement of 3rd party.

Cross-chain solutions are increasingly catching the attention of speculators within the decentralized finance ecosystem. As products and platforms grow in popularity, interoperability between separate chains is becoming increasingly important. The space is evolving very rapidly, and the lack of cross-chain interoperability platforms has been one of its biggest hurdles to growth. There have been diverse challenges within the Defi and Albino Bridge is committed to solving a few of them.

ALBINO EXCHANGE

A decentralized trading platform on Albino will be added, satisfying the need for fully decentralized payments. Albino is on Albino making it easy and convenient to connect and process transactions, breaking any user-touchable space close to the future world of the dominant cryptocurrency.

Albino guarantees outstanding speed of token processing and extremely low transaction fees so that the community can easily connect. Albino is an easy, fast, and secure exchange creating a completely new ecosystem, built to facilitate a crypto derivative market where traders have access to a variety of trading and investment instruments, enabling a highly liberating, strategic, low-risk, and seamless trading experience in a truly decentralized way.

A decentralized exchange (or DEX) is a peer-to-peer marketplace where transactions occur directly between crypto traders. Albino is an easy, fast, and secure exchange in a truly decentralized way. We are going to create an ecosystem where people will launch their own decentralized exchange. Albino is a peer-to-peer (P2P) that connects buyers and sellers where the people can exchange their tokens for the desired one. The Exchange is non-custodial, meaning a user remains in control of their private keys when transacting on a DEX platform.

01. No KYC/AML

For OUR exchanges, KYC/AML (Know Your Customer and Anti-Money Laundering) compliance is the norm. Individuals are frequently required to present identity documentation and proof of address for regulatory purposes. Because our DEX does not require any documents for verification, the user remains entirely anonymous.

02. Additional Features:

Powerful Matching Engine

Multi-layer Security

Preferred Trader Selection

Admin Panel

Support Team

WHAT ARE THE POTENTIAL BENEFITS OF USING A DEX?

Vast variety

Albino DEXs provide an almost unlimited selection of coins, ranging from the well-known to the strange and completely random. Because anyone may construct a Polygon-based token that is an Eco-Friendly blockchain and form a liquidity pool for it, there will be a wider range of projects, both verified and unvetted.

Hacking risks can be reduced

Because all funds in a DEX trade are housed in the traders' own wallets, they are less vulnerable to a hack. Holders can be satisfied by adopting Albino DEX because hacking threats are reduced to a bare minimum.

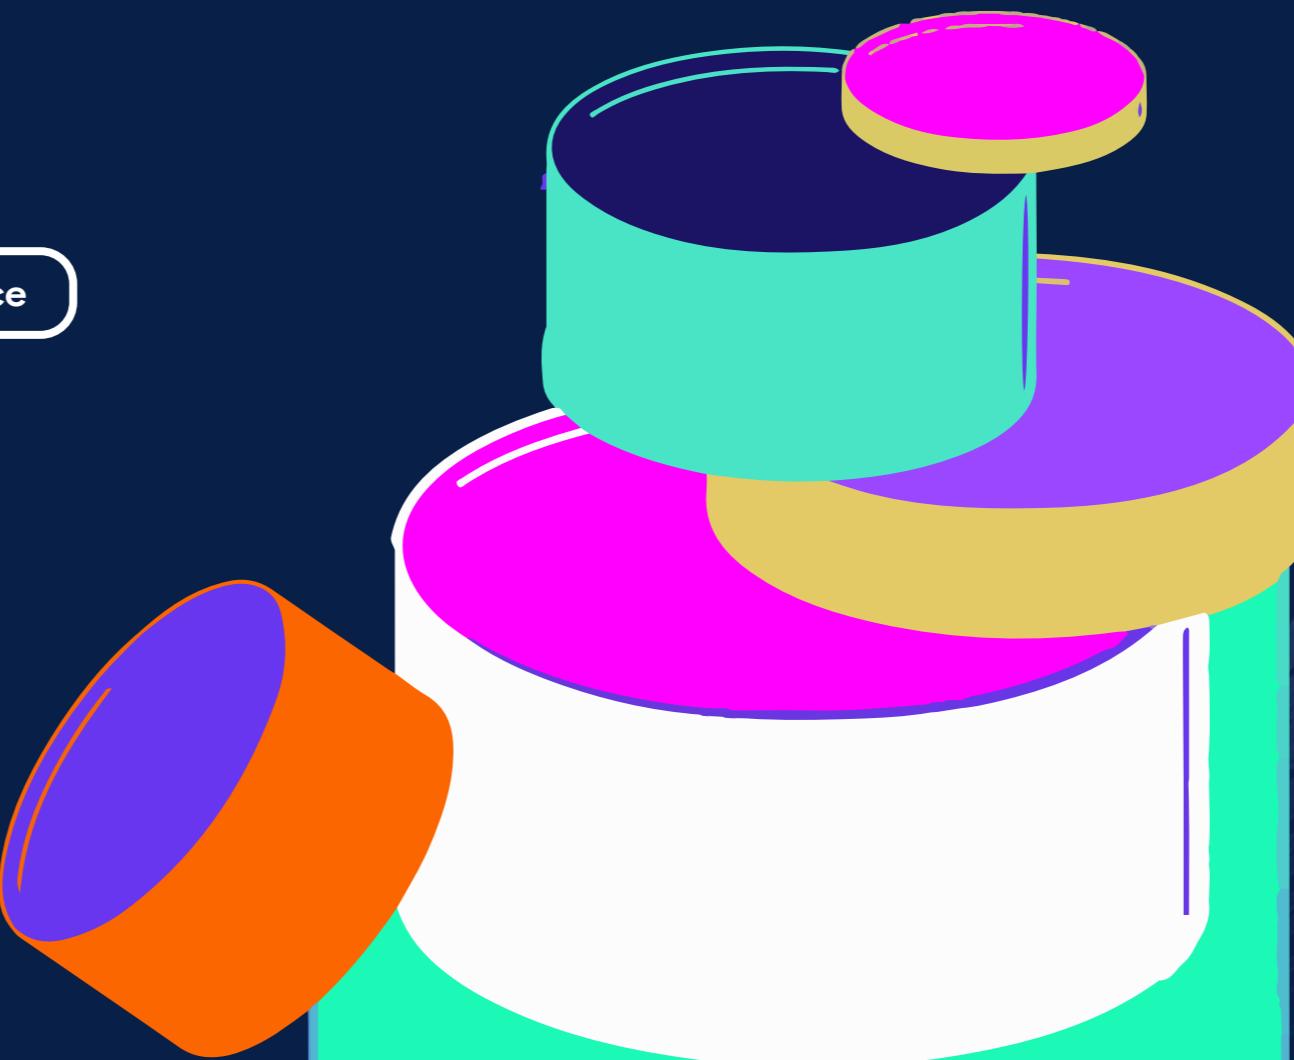

Utility in the developing world

Albino DEX's peer-to-peer trading, fast transactions, and anonymity have made it increasingly attractive in developing markets where reliable banking infrastructure may not be accessible. An Albino DEX is accessible to everyone with a smartphone and an internet connection.

WHY CHOOSE ALBINO?

- Open for global participants
- Blockchain compliant
- Lower Fees and Security
- Free from corporate and government interference
- Transparency & Immutability
- Deflationary Token
- Prize Pools
- Transaction Traceability
- Ease of use
- Safe & Secure

01.

Open for global participants

Albino can be used by anyone anywhere. An added benefit of the Albino is that it's completely secure and transparent, so it can be used freely across borders. The use of technology will facilitate a financial revolution that will leave everyone more financially connected, empowered, and enabled in the food industry.

02.

Free from corporate and government interference

Albino transactions have no intermediary institutions or government involvement, the costs of transacting are kept very low. Additionally, any transfer happens very quickly, eliminating the inconvenience of typical authorization and waiting period requirements.

03.

Blockchain compliant

Albino is a Blockchain-compliant token, which means that it supports a few functions that all tokens support.

04.

Deflationary Token

The Albino token has a low supply with continuous burns. This reduces overall supply and increases the scarcity and value of the remaining token in circulation. It is a deflationary asset and is designed to rise in value as time goes on.

05.

Prize Pools

For accurate predictions, there will be an Albino reward for each staking pool. These, too, will change over time depending on the community's consensus.

06.

Transparency & Immutability

With Albino, each time an exchange of tokens is recorded on the blockchain, an audit trail is present to trace where the token came from. This can not only help improve security and prevent fraud in exchange-related businesses, but it can also help verify the authenticity of the traded assets.

07.

Lower Fees and Security

The fees associated with Albino transactions are far less than those associated with debit, credit cards as well as wire transfers, and BACS payments.

08.

Transaction Traceability

Because each new transaction is encrypted and linked to the preceding transaction, Albino is significantly more secure than other record-keeping systems. Albino is made up of a complex string of mathematical numbers and cannot be changed.

09.

Ease of use

Ease of use is the reason why Albino has more value. All you need is a smart device and an internet connection. Investors can easily earn rewards by ordering their favorite meals or staking their Little Pony.

10.

Safe & Secure

Albino is a safe and secure platform that is audited and our technical team is continuously improving the security of the system to ensure the safety of the platform.
